

Operations Notification Policy

Synthetic policy - ambiguous deadline and human-review test

Policy ID	ONP-2026-003
Version	1.2
Owner	Operations and Risk

1. Material Service Disruption

1.1 When a material service disruption is identified, the Operations Team must notify affected business owners promptly.

1.2 The initial notification should describe the affected service, known customer impact, and the current recovery status.

Expected behavior: The word "promptly" does not define a numeric deadline. The system should mark the deadline as ambiguous and require human review instead of inventing a number.

2. Regulatory Inquiry

2.1 If the company receives a written regulatory inquiry, the Legal Operations Team shall acknowledge receipt within two business days.

2.2 A substantive response must be prepared within a reasonable period after the relevant records have been collected.

3. Customer Complaint Escalation

3.1 If a customer complaint alleges unauthorized disclosure of personal information, the Privacy Team must open an investigation within twenty-four hours of receiving the complaint.

4. Background

The organization operates support services across multiple time zones and maintains separate escalation contacts for business, privacy, and legal matters.

5. Human Review

5.1 No external regulatory response or customer notification may be sent solely on the basis of an automated recommendation. A designated reviewer must confirm the applicable obligation before any such communication is released.
